[Hiring Manager name, or "Hiring Team"]
[Company name]
[Company location]

Dear [Hiring Manager / Hiring Team],

I am writing to apply for the [Job title] role at [Company name]. As a Software Engineer with hands-on experience building production backend systems and automating tests – and currently completing an MSc in Data Science & Analytics in the UK – I am confident I can contribute quickly to your team.

In my most recent role at SIA Publishers and Distributors, I designed and built **24+ production RESTful APIs** in Java 17 and Spring Boot – using Hibernate and JPA, and documenting endpoints with Swagger / OpenAPI – for an educational platform used by **over 500,000 users**, working in a fast-paced, six-person Agile / Scrum team with sprints and code reviews. Alongside development I managed the live SQL Server and PostgreSQL databases, writing and optimising SQL queries, validating data integrity and resolving production user-data issues, and producing reporting queries that gave the operations team accurate, real-time sales figures. I also have a strong QA background: I automated **12+ business-logic tests** with Selenium WebDriver and integrated them into GitLab CI/CD pipelines, saving the team an estimated **11+ hours of manual testing every week**, and I debug production incidents through log analysis and root-cause investigation. This mix of backend development, database work and test automation means I can add value across development, support and QA.

I am drawn to [Company name] because [one or two specific, genuine reasons - a product you admire, their tech stack, their mission, a project on their site]. The [Job title] role is a strong match for my background in [name 2-3 skills from the job advert, e.g. Java, Spring Boot, REST APIs, SQL, testing], and I am eager to keep growing as an engineer in a UK team.

My MSc is a sandwich degree, so I am looking for a **full-time placement year starting between late January and late February 2027**. I am eligible to work **full-time (40 hours per week)** in the UK under my university's endorsement, in line with UK visa regulations, and I am open to hybrid, remote or on-site work. I have attached my CV, and I would welcome the opportunity to discuss how I can support your team. Thank you for your time and consideration.

Yours sincerely,

Naseeruddin Shaik
